

Problem 4

Anookwesens took her little cousin Willow with her to gather rice.

Scene 1 has Anookwesens and a smaller girl looking at the river.

Anookwesens imagined the spot on the river where they were gathering rice in eight parts like this

Anookwesens gathered rice along $\frac{5}{8}$ of the river bank. Her cousin gathered rice along $\frac{2}{8}$. How much of the river bank had rice left?

Here is one way to solve this problem. Color in the part that shows how much Anookwesens gathered. The riverbank was divided into 8 parts. Anookwesens gathered rice from 5 parts.

Next, color in the parts where her cousin gathered rice. Let's say she started from the other end. When we color in the 2 parts where her cousin gathered rice, it looked like this.

So we can see that the answer is $\frac{1}{8}$.
