

How to solve the timeline problem

1. Compute how far it is from 1000 B.C.E. to 0
2. Compute the distance from 0 to 2015
3. Add those two numbers together

1000
B.C.E.

0

800

2015

1,000

2015

$$\begin{array}{r} 1,000 \\ + \underline{2,015} \end{array}$$
